Long-term chronic exposure may result in injury to certain organs or tissues.  
Substance is an anticoagulant and the risk is a potential internal haemorrhage.  
Could be absorbed in contact with the skin and cause internal haemorrhage.  
If swallowed serious risk of internal haemorrhage.  
Other symptoms: pallor, abdominal or back pain.

#### 4.3 Indication of any immediate medical attention and special treatment needed.

In case of doubt or when symptoms of feeling unwell persist, get medical attention. Never administer anything orally to persons who are unconscious. Keep the person comfortable. Turn him/her over to the left side and stay there while waiting for medical care.

As a rule, symptomatic treatment for compensating the observed effects.

Stomach-wash if haemorrhage symptoms are not observed.

In the event of haemorrhages, inject vitamin K1, control coagulation time, and if necessary give fresh blood transfer.
